Vol. 5.

Index of Plates.

The numbers indicate the plates.

On each plate, for want of space, only the first and last of the genera represented on the plate are stated, for instance on pl. 117 only „Hypna-Anaea“, whilst it also contains figures of species of the genus *Protopogonius* enumerated in the index of plates, as stated in the text-volume on p. 579/80.

A collection of 100 butterflies, likely from a museum or a scientific collection, arranged in a 10x10 grid. The butterflies are mounted on a light-colored background. They exhibit a wide variety of colors, including browns, oranges, yellows, greens, blues, and reds. Some butterflies have distinct patterns, such as spots, bands, or markings on their wings. The arrangement is systematic, with each butterfly occupying its own space in the grid. The overall appearance is that of a well-curated and preserved collection of lepidopteran specimens.
